Using Generative AI Responsibly in Learning & Development

Facilitator's Guide

Virtual Instructor-Led Training (VILT)

Duration: 60 minutes

Audience: L&D professionals

Session purpose: Help L&D professionals identify useful AI applications, spot common risks, and apply a human review process before using AI-assisted content.

Format: 60-minute virtual workshop with discussion, scenario review, and practical takeaways.

Companion materials: Slide deck + job aid handout (Responsible AI Usage in L&D).

Session Overview

Audience	Instructional designers, eLearning developers, trainers, facilitators, and L&D partners exploring GenAI in their workflow.
Prerequisites	General familiarity with training design or delivery. No advanced AI knowledge required.
Delivery format	Virtual instructor-led session with whole-group discussion and a small-group review activity.
Materials	Companion slides, participant chat/poll tools, scenario handout, and Responsible AI Usage in L&D job aid.
Facilitator prep	Review scenario answers in advance, decide how breakout groups will report out, and tailor examples to the audience's work context.

Learning Objectives

- Identify appropriate and inappropriate uses of generative AI in learning and development workflows.
- Recognize common risks in AI-assisted content, including inaccuracy, bias, privacy concerns, and intellectual property issues.
- Apply a simple human review process to improve AI-generated content before using it in workplace learning materials.

Agenda at a Glance

Time	Section	Purpose
5 min	Welcome and framing	Set expectations, establish relevance, and preview outcomes.
10 min	AI in L&D: opportunities	Explore practical uses such as drafting, ideation, summarization, and support for translation/localization.
15 min	Risks and guardrails	Discuss accuracy, bias, privacy, copyright, and the need for human accountability.
20 min	Practice activity	Review an AI-generated learning asset excerpt and identify improvement needs.
10 min	Debrief and next steps	Surface patterns, reinforce review habits, and point to the job aid for ongoing support.

Detailed Facilitation Guide

Tip: Use the script as support, not a word-for-word requirement. Adapt examples to the audience, industry, and current AI policies in your workplace.

Time	Section	Facilitator notes	Learner activity	Materials
5 min	**Welcome and framing**	Welcome participants. Introduce the session title, the purpose, and the three learning objectives. Use a quick opener: “Where are you currently using AI in your workflow?” Emphasize that the session focuses on practical decision-making rather than technical depth.	Respond in chat or poll with one current AI use case or one question they hope to answer.	Slides 1-3
10 min	**AI in L&D: opportunities**	Walk through common use cases: drafting objectives, brainstorming activities, rewriting content for tone, summarizing SME notes, generating quiz stems, and supporting localization. Stress that AI can accelerate work, but outputs should be treated as a draft, not a final product.	Contribute examples from their own work and discuss where AI saves time without replacing judgment.	Slide 4
15 min	**Risks and guardrails**	Introduce the four review lenses: accuracy, bias/inclusion, privacy/confidentiality, and intellectual property. Reinforce human accountability: a person, not the tool, owns the final content decision. Share one example of each risk in a training context.	Listen, ask questions, and identify which risk seems most relevant to their context.	Slides 5-6; job aid
20 min	**Practice activity**	Place learners into pairs or small groups. Share the AI-generated sample excerpt. Ask groups to mark issues and suggest revisions. Circulate prompts: “What would you verify?” “Who could be excluded by this wording?” “What source or SME check is needed before use?”	Review the sample, identify issues, and prepare one recommended revision or review action to report out.	Slide 7; activity handout
10 min	**Debrief and next steps**	Facilitate report-outs. Capture recurring themes. Summarize the review process: clarify the task, draft with AI if appropriate, verify content, screen for risk, revise with a human lens, and secure approval where required. Close by sharing the companion job aid as a takeaway.	Share group observations and note one action they will use in their own workflow.	Slide 8; job aid

Practice Activity: Review an AI-Generated Draft

Scenario: A training team used a generative AI tool to draft a short launch announcement and course summary for a new internal security awareness module. Participants review the excerpt and decide whether it is ready to use.

Sample excerpt:
"Our new cybersecurity course guarantees that employees will always recognize threats after completing the module. The course replaces judgment with an AI assistant that flags every suspicious message accurately. Managers may upload real employee emails into the tool to generate realistic practice scenarios."

Facilitator Debrief Answer Key

- Accuracy: The excerpt makes unrealistic claims such as "guarantees" and "flags every suspicious message accurately." These statements should be qualified and validated with SMEs.
- Bias and inclusion: "Replaces judgment" suggests overreliance on automation and can minimize human decision-making. Review tone and implications for responsible use.
- Privacy/confidentiality: Uploading real employee emails to an external tool may violate privacy, security, or data handling rules.
- Intellectual property and policy: Confirm the organization's approved tools, acceptable inputs, and any restrictions on using proprietary content with AI systems.
- Recommended revision: Use AI to draft examples only with sanitized content, verify all factual statements, and make clear that learners still need human judgment.

Facilitator Tips

- If the group is quiet, assign each small group one review lens first, then compare across groups.
- If time is short, debrief only the top three issues and reinforce the review process verbally.
- If participants want policy answers, position the session as an awareness and practice experience; point them to internal policy owners for official guidance.

Appendix: Slide Notes and Materials Map

Slide	Title	Facilitator use
1	Title	Open the session, establish the audience, and reinforce the relevance of AI guardrails in everyday L&D work.
2	Session objectives	Review intended outcomes and set expectations for participation.
3	Agenda	Signal pacing and reassure learners that the workshop is practical and interactive.
4	AI in L&D: opportunities	Prompt discussion about where AI can accelerate work when paired with human review.
5	Four review lenses	Introduce the core framework used throughout the rest of the session.
6	Review process	Provide a simple sequence learners can remember after the workshop.
7	Practice activity	Give instructions, timing, and report-out prompts for the scenario review.
8	Key takeaways	Close with action steps and direct participants to the job aid for continued use.

Note: This facilitator's guide is a sample portfolio artifact. In a live project, add any required organization-specific policy references, approved-tool guidance, accessibility notes, and a participant handout as needed.

Using Generative AI Responsibly in Learning & Development

Facilitator companion slides for a 60-minute virtual workshop

Audience: L&D professionals | **Format: VILT** | **Duration: 60 min**

Use these slides with the detailed facilitator guide and the Responsible AI Usage in L&D job aid.

Workshop focus

- Use AI to support work, not replace judgment
- Review outputs before sharing or publishing
- Apply clear guardrails in L&D contexts

Three habits to reinforce

Prompt with care

Use clear tasks and avoid sensitive or proprietary information.

Review critically

Check content for accuracy, tone, inclusion, and policy fit.

Use responsibly

Treat AI output as a starting point and keep human accountability in the loop.

Session objectives

By the end of the session, participants will be able to:

1. Identify appropriate and inappropriate uses of generative AI in learning and development workflows.
2. Recognize common risks in AI-assisted content, including inaccuracy, bias, privacy, and intellectual property issues.
3. Apply a simple human review process to improve AI-generated content before using it in learning materials.

Focus:
practical decision-making

Agenda

A simple flow for a 60-minute virtual session

5 min	10 min	15 min	20 min	10 min
Welcome & Framing	AI in L&D: Opportunities	Risks & Guardrails	Practice Activity	Debrief & Next Steps

AI in L&D: Where it can help

Useful applications when outputs are treated as drafts and reviewed by a human

Drafting & rewriting

Generate first drafts for course descriptions, announcements, and facilitator prompts.

Ideation

Brainstorm activity formats, examples, reflection questions, and scenario variations.

Summarization

Condense SME notes or source documents into usable outlines or key points.

Assessment support

Suggest quiz stems, distractors, and scenario prompts for later validation.

Think: accelerate work, not replace judgment

Four Review Lenses

Use these checks before AI-assisted content moves toward delivery or publication

Accuracy

Verify facts, examples, procedures, and claims with reliable sources or SMEs.

Bias & inclusion

Screen for stereotypes, exclusionary wording, or assumptions about learners.

Privacy & confidentiality

Avoid sensitive, proprietary, or identifiable data in prompts or uploads.

Intellectual property

Confirm tool permissions, source rights, and organizational policy requirements.

Simple Review Process

A repeatable sequence learners can apply after the workshop

1. Clarify the Task
2. Draft with AI if appropriate
3. Verify Content
4. Screen for Risk
5. Revise with a Human Lens
6. Use or Escalate

Key message: The tool can support efficiency, but a person remains accountable for accuracy, tone, inclusion, policy alignment, and final use.

Practice Activity

Review an AI-generated training excerpt in pairs or small groups

Sample excerpt

“Our new cybersecurity course guarantees that employees will always recognize threats after completing the module. The course replaces judgment with an AI assistant that flags every suspicious message accurately. Managers may upload real employee emails into the tool to generate realistic practice scenarios.”

Prompt groups to identify:

- factual or unrealistic claims
- bias or problematic wording
- privacy or confidentiality issues
- review actions needed before use

Report out one revision or safeguard

Key Takeaways

Close the session by reinforcing the habits learners should carry into their workflow

- Use AI for support, not autopilot.
- Treat outputs as drafts that require review.
- Check accuracy, bias, privacy, and intellectual property.
- Keep human judgment and accountability in the loop.

Leave-behind resource

Responsible AI Usage in L&D job aid

Share the 1-page checklist after the session to help learners apply the review lenses during real work.

Recommended next step: customize with internal policy notes
